

# CHANNEL POWER MONITOR

## Radio System Monitoring

### CPM SERIES

## Radio System Health Monitoring Solutions

Be confident of the status of each individual component in a radio system with effortless monitoring from a computer, tablet or mobile device.

Comprised of a central processor and a variety of sensors, the Bird CPM can be setup to monitor radio performance, combiner loss, and antenna/feedline characteristics providing continuous information on the health of each component it monitors.

Easy system access is available from any computer, tablet or phone on your network with the CPM-hosted web page. This allows for set up of alarms for failure conditions such as high or low power, or poor antenna VSWR. The monitor includes both software and hard contact alarms and can be configured to send SNMP Trap messages for emergency condition alerts. Data logging is standard and takes reliability one step further by enabling you to see degraded performance before it becomes an emergency.

### PRODUCT FEATURES

- Power monitor display and sensors allow you to build a system around your needs.
- Monitor up to 16 non-directional and 16 directional sensors simultaneously.
- Measures forward, reflected, composite and individual channel power as well as antenna system VSWR.
- Monitoring of the system is accomplished via interface with the front panel or accessed through the built in web server and web page.
- Configurable alarming for high and low level power and high antenna VSWR, utilizing hard contact and SNMP formats.
- Standard Push-to-Talk (PTT) compatibility.

### SENSOR OPTIONS

- Model 4044 Non-Directional Power Sensor** measures output power of either analog or digitally modulated radios up to 125 watts.
- Model 4042 Directional Channel Power Sensor** provides power readings by individual channel.
- Model 4043 Directional Power Sensor** provides composite power readings.
- Model 5009 Directional Power Sensor** provides power readings in HF frequency bands.

Solutions are available for the entire range of Land Mobile Radio frequencies.
